Hootsuite, High School Summer Student, Software Developer  
5 E 8th Ave, a,  
Vancouver, British Columbia V5T 1R6

Dear Hiring Manager,

I want to work for Hootsuite because software development is my passion. I want to pursue software engineering as my career and I feel as if this is an opportunity that I should really aim for. My experience with technical design skills has me well equipped for this position.

I take it upon myself to learn new topics that are relevant to projects I am creating. I am always learning and researching advanced topics such as machine learning and artificial intelligence on my own so I have a head start in university. I have a 4.0 GPA and completed Game Development 11 with 100% as a programmer. I programmed games that had server-side and client-side programming, RESTful APIs, gamepad integration, vector math, angular physics, and trigonometry. I have worked with Git, and databases as well. I am eager to work along with a professional to learn how a big software company functions. I work on my projects until they are finished and I leave none uncompleted.

Working as a software engineer is my dream job and I think I am a very good candidate for this job. I have experience with software development, and I strive to become the best I can at my passion. I am thrilled to see you at the interview. The best way to reach me is through my email which is at the top of this page.

Sincerely,

**YUVRAJ KHOSA**
